

Youngevity Manufacturing & Quality Control

I continue to be SO impressed AND amazed by the quality of Youngevity! I just got off the phone with Richard Renton at Youngevity. I had a long list of questions to ask him from all of you, my dear colleagues in the natural healthcare industry. Below you will find the results of my inquiries, but first a little bit about Richard. Mr. **Renton** is a Vice Presidential Marketing Director and oversees quality control issues for **Youngevity** products. He graduated from Portland State University, majoring in Sports Medicine, Health, Physical Education, and Chemistry. He has served as an Associate Professor at PSU in Health and First Aid. He is available anytime for you to contact with questions:

rrenton@youngevity.com
[360-837-1080](tel:360-837-1080)

1) Quality control, testing-- Youngevity products are manufactured by a third party, and they are subject to random testing by Youngevity chemists (and they are terminated relationships with manufacturers that do not meet YGY standards) as well as adhering to Current Good Manufacturing Practice (CGMP) with the FDA, along with 3rd party testing by NSF & National Product Association. Every batch is tested, spot checks are conducted, and other testing includes shelf life, adherence to the standards for the product, etc. All FDA guidelines and USPs (United States Pharmacopeia) are adhered to by Youngevity.

2) Youngevity vitamins are manufactured in the same way as Standard Process vitamins using algae. Sources of vitamins are from non-GMO European sources, for instance ascorbic acid from corn is sourced from Europe vs. the US where our corn has been adulterated.

3) Independent studies and trials on the products can be found in the Clemson Study & The Manitoba Study (see attachments-- can also be found on the Youngevity website <http://www.youngevity.com> under Member Resources>Product Info Center)

4) Enzymes are created through a fermentation process using yeasts (remember that not all yeasts are evil, and this is the process used by most manufacturers of nutritional supplements)

5) Plant-Derived Minerals-- the mineral sources are both ionic (carrying a like-charge) and colloidal (suspended in liquid and exposed to time, pressure and time), able to penetrate the nucleus of the cell. No electrical charge is used for these particles.

6) Process used to decaffeinate Youngevity coffee....it is chemical....so that is less than impressive....in fact, Richard said he wouldn't drink it because of that fact....

Here is a list of sources for Dr. Wallach's research, credentials and publications in medical and veterinary journals:

<http://wallachonline.com/>

<http://wallachfiles.com/>

Here are tons of YouTube videos from a renowned ND who is a champion for Youngevity (independent for years, not sure if he is anymore-- he would lecture and educate on Youngevity even before he was a "member"):

<http://drglidden.com/category/dr-peter-glidden/>

<https://www.youtube.com/user/YoungevityEducation>

There are many more people I can refer you to if you want to see more. Just let me know.

Here is a Facebook page dedicated to healing testimonies through Youngevity products:

<https://www.facebook.com/pages/Testimonies-of-the-Power-Dr-Joel-Wallach-Fdi-Youngevity-Products/262996567116578>

And another website:

<http://youngevityproducts.net/testimonials>

Check out **Dead Doctors Don't Lie** for more about the power of real food supplements-- I can get you a copy of the CD if you would like to listen to something really inspiring while driving-- just let me know.

Meanwhile, I will send along a bunch of protocols from a colleague in Youngevity who has typed up Dr. Wallach's work-- I needed two specifically: Cystic Fibrosis and Cancer.

Let me know if you have any other questions-- please come hear more at the regular Monday presentation@7pm at Best Western Loveland by Scott Fardulis (my mentor) and possibly me (I was thrown out of the nest last week! Yikes!). Let me know if you will be attending-- please invite others to meet Scott and me!
